OBJECTIVE:

I am an aspiring entrepreneur, with experience managing self-made applications and team web apps. My background in visual design, and web design keep me mindful but also competitive. I am fueled by passion for understanding the vas market of trendiness and my knowledge in sociology gives me an understanding of cross-culture appropriations. I consider myself a 'forever student,' eager to both build on my academic foundations in computer programming, sociology, and I am quick to stay in tune with the latest digital marketing strategies through continued coursework and experience.

PROJECTS:

THE LONG CUT

This was a collaborative Group project with an endless vision. Here you can find not short cuts, but long cuts. Scenic routes to enjoy and rekindle your spirit with a breath of fresh air!

Link: https://github.com/Tbonexas/longcut

FREE BEES

Here we have a collaborative web app with no ceiling (endless possibilities). It has a fun BEE theme with endless bee puns! The purpose of this project was to allow users to get rid of any personal items for free. This free market will bring users who are looking to get rid of personal items at no cost and help those who are in the need of items to pick them up for free. There are no price descriptions in the project because it's not a buy and sell market but rather a donation type of market.

EMPLOYEE TRACKER

Developers are often tasked with creating interfaces that make it easy for nondevelopers to view and interact with information stored in databases. Often these interfaces are known as Content Management Systems. In this back-end application, we can

be architects and create a managing system for company's employees using node, inquirer, and MySQL.

PASSWORD GENERATOR

This basic web app will ask a series of questions to secure a password to your choosing length and character types. It has a min length of 8 and a max length of 128 with the ability to choose from number, special characters, capital letters and lowercase letters. It is designed to be different every time after you clear the text and start over.

CAREER SUMMARY/ HIGHLIGHTS:

FOREVER 21:

I have involved myself in retail for an amazing three years, I have seen great managers come and go. Having had the opportunity to meet wonderful people, I have learned a lot of different leadership skills from each one of them. In addition, I have proven myself to be a wonderful sales associate and to have been very interactive and proactive with customers which is why I was given the title of a shift leader. As a shift leader my focus has always been to be the good example because being the example to other employees is what I believe all leaders should be. However, I understand that in every job there are different environments which is why I am open to adapt and change to the company's standards.

UPS:

Joining the UPS union was a great opportunity and a gateway to expand my skills and knowledge in the workforce; so far working with Air Cargo at UPS I have successfully learned how to: properly sort packages, load and unload airplanes/trailers, safety regulations about working around aircrafts, how to work with high precautions around heavy equipment, trained to drive a tug, and learned the importance of effectively loading to max volume.

USPS:

Working with the postal service is and has been a great opportunity, I have learned how to critically manage my time while on the job. One of my many achievements was to be a recognized safe employee. Not only that but having a government job has showed me the importance and the many differences between a job and a career. At the post office I have built a well-rounded resume in which I was not only taught how to deliver mail, but I was also put in the position of a dock worker where I had to sort, load, and unload trailers

either by pushing equipment, using a manual pallet Jack or an electric one. Also, I was taught the role of an office clerk.

AMAZOOMDS:

My current employer is a third-party company that delivers parcels for the ecommerce giant, Amazon. Working as a courier opens the field for independence, problem solving and time management. These skills are required heavily on a job with very little to no supervision. In other words, I have learned how to be my own boss and be able to execute a time sensitive job in an efficient and safe manner.

ACCOMPLISHMENTS:

- Enrolled in the Dean's List of Academic Achievement

- Won scholarship to the URC codding bootcamp

SKILLS:

- JavaScript
- Html
- CSS
- C++
- SQL- Oracle
- Node js
- Express
- Mango DB
- Database Management
- OOP
- Friendly in any situation
- Patience
- Fluent in Spanish

- Open and easy to get along with
- Can easily recognize a problem and proceed to fix it
- Always determined to do my best
- Able to safely move heavy objects
- Familiar with many computer programs such as excel, PowerPoint, Word and Access
- Recognizing people's wants and needs
- Able to complete task in a time strict environment

CERTIFICATES/DEGREES:

- A.S. Computer Programming
- Certificate in Object-Oriented Design & Programming

- Certificate in Computer Information Technology
- Certificate in C++ Programming
- A.A. Social & Behavior Sciences

OVERVIEW:

Overall, I am grateful to have this opportunity to exceed in the opening job. Nevertheless, I believe I will fulfill this position not only because I have the experience and

understand what is necessary for this position, but also because I am aware that there still is a lot more to learn.
